### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### DETAILED ACTION

1. In view of applicant's argument, the examiner has decided to issue another non-final office action to use a reference with a dissipative housing.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 3-4, 6-11, 13-15, 17, 19-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Gordbgeli et al (US patent 4,460,944).

Gordbgeli's device discloses a cap connector assembly (figs. 1-7) with plurality of sides for mechanically and electrically coupling to a connector having a dissipative boot (defined as an enclosing or protective casing) housing (18), the housing sized to receive the connector therein, plurality of contacts (21, 23), the housing comprising a floor portion contacting the connector, a retainer and tabs and protrusions positioned on the housing for retaining a ground wire (22) and the other contacts retainer arms at 23a in connection with the housing, the connector housing shaped as a housing cap or pyramid shape, the openings in the housing used as alignment guides to lead the wires and other connectors.

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 5, 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gordbgeli et al (US patent 4,460,944).

Gordbgeli's device discloses the aforementioned limitations including the contacts (21, 22, 23), but fails to explicitly disclose the use of four connector contacts; It would have been obvious to one having ordinary skill in the art at the time the invention was made to use four connector contacts; since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art. *St. Regis Paper Co. v. Bemis Co.*, 193 USPQ 8.

3. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gordbgeli et al (US patent 4,460,944) in view of Feng (US patent 6,046,908).

Gordbgeli's device discloses the aforementioned limitations, but fails to explicitly disclose the use of the insulative material such rubber (52) with the dissipative housing. Feng's device disclose the use of the insulative material such rubber with the dissipative housing (10). It would have been obvious to one having ordinary skill in the art at the time the invention was made to add the insulative material, rubber to the dissipative

housing such as the one discloses in Feng's device in order to reduce the energy dissipation in Gordbgeli's device.

### ***Conclusion***

4. Claims 12, 18 are objected to as being dependent upon a rejected base claims, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Prior art fails to disclose the combination features the retainer arms with the snapping features with the rest of the claims limitations.
